

GETTING METAGEAR TO INSTALL:

manual installation of the gtk toolkit needed to build the abstract screener GUI

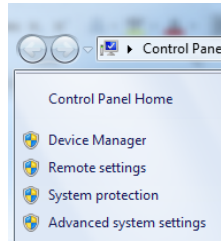

- 1) Visit: <http://ftp.gnome.org/pub/GNOME/binaries/win32/gtk+/2.22/>
- 2) Download: **gtk+-bundle_2.22.1-20101227_win32.zip** (or if necessary, the 64bit version)
- 3) Create new directory/folder at the base of your main drive, such as: C : \GTK
- 4) Unzip all file contents from **gtk+-bundle_2.22.1-20101227_win32.zip** into this new folder. It should look like this:

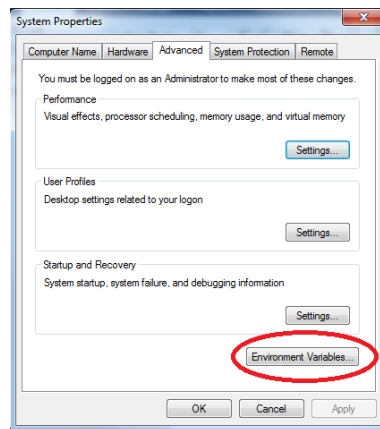

- 5) Right-click over 'Computer' from the 'Start Menu' (i.e., ) to open its 'Properties', such as:

- 6) Click on '**Advanced system settings**' option found on the left of the window, as in here:

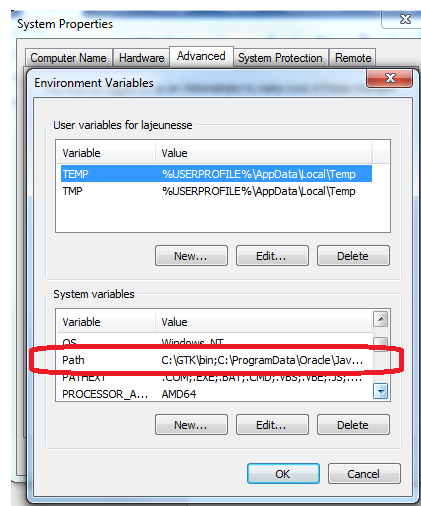

- 7) Click on the '**Environment Variables...**' button:

- 8) Edit the System variable called '**Path**' by adding the above directory followed by a semicolon to the start of the Value, where for example in our case it is:

C:\GTK\bin;

The text to edit is a long string of directories separated by semicolons, as seen below:

- 9) Finally, click '**OK**' and restart R or R Studio. This should fix most issues with installing the gtk toolkit.
